

toxin = single exposure

toxin + toxin + toxin + toxin...=
repeated exposure

TOXIN!!! = acute exposure
(inhalation, ingestion, or absorption)

toxin a + **toxin b** = combined exposure

toxin + toxin + toxin + toxin + toxin + toxin + toxin + toxin =
low dose repeated exposure (aggregate)

toxin a + toxin a + toxin d + toxin b + toxin a + toxin c + toxin b + toxin e + toxin z =
low dose combined exposure

toxin a X toxin b =
SYNERGISTIC
EXPOSURE!!!

Which type of exposure data do you think Health Canada
requires the chemical companies to provide?
Which type of exposures do you think are the most dangerous?
